

## **AMENDMENTS TO SPECIFICATION**

Please amend the fifth complete paragraph on page 4 of the original specification (page 4, lines 16-20), as follows:

By this invention, the safety margin involved in meeting and maintaining placement tolerances and distances of equipment is enhanced. Cleanliness standards are easily achievable, especially in the preferred embodiment which make use of rails openings on lateral sides of the wheel receiving portion that allow easy removal of debris from the wheel receiving portion. Further, obstruction or adverse impact on other equipment, especially sensitive hospital tubing or apparatus, in the vicinity of the equipment being stabilized is minimized.
